

Solaris

**The era of tokenized income with
gamification as a means of engagement**

Liquidity Funded Tokens

Gamification as a means of engagement

Value-Backed, Growth-Driven, Cash flow sustainable & Gamified Digital Assets

Overall Problem Summary

Digital assets today are purely speculation & hype cycles.

Meme Coins: No intrinsic value → pump & dump → zero.

NFTs: One-time artist revenue followed by abandonment; zero guaranteed floor; buyers risk total loss; no ongoing cash flow; reliant on resale speculation

Utility Tokens: Utility claims rarely deliver; inflationary erosion; no real redemption rights; prone to pump-and-dumps; regulatory risks.

Result: Users get burned, creators lack sustainable income, regulators skeptical.

The Liquidity Extraction Crisis

Problem 1

The existing token launch model is fundamentally extractive, converting community participants into exit liquidity for insiders, VCs, and early whales. This leads to unsustainable economics and destroys trust.

Current System Failure	Impact on Market & Users
Hype Cycles & Speculation	Assets lack intrinsic value and are driven purely by social media marketing and FOMO (Fear Of Missing Out).
The Exit Liquidity Trap	The community provides the cash that allows founders and early investors to sell their tokens at peak price (pump-and-dump), often leading to a 100% loss for late buyers.
Zero Guaranteed Floor	Tokens (Memecoins, NFTs) have no backing and can collapse to zero, making them uninvestable for mainstream users seeking capital preservation.

Trading as a Barrier for User Adoption

Problem 2

Web3 user adoption is stunted by the reliance on complex, intimidating, and low-engagement DeFi primitives as the primary interaction mechanism.

Current System Failure	Impact on Adoption & Creators
Complexity Over Intuition	Users are forced to master complex concepts (slippage, order books, bridging, staking) just to participate, creating a steep learning curve and massive drop-off.
Passive Engagement	The core activity is trading and speculation, which is inherently low-engagement and does not build true community or active participation.
Lack of Sustainable Cash Flow	Creators must rely on one-time sales (NFT mints) or highly inflationary token emissions, rather than a continuous, intuitive, cash-flow-sustainable engagement loop.

We have the data to prove the problem exist

Explosion in Scam Losses: Between 2020 and 2024, scam losses in the United States alone grew 46-fold, soaring from \$0.2 billion to a staggering \$9.3 billion.

Rug Pulls and Thefts: The most damaging examples of liquidity extraction occurred early in this period, with crypto rug pulls resulting in over \$5.06 billion in global losses in 2021. The trend of massive theft continues, with headline losses approaching \$2.5 billion in the first half of 2025, surpassing the entire loss value of the previous year.

The "Pump and Dump Zero" Reality: The volatility inherent in speculative tokens is exemplified by high-profile failures in 2024, where projects like the Hawk Tuah Token lost 95% of their value shortly after achieving a market capitalization in the hundreds of millions, validating the core problem of assets collapsing to zero value.

Solution

Liquidity Funded Tokens (LFTs) introduce a new paradigm in digital assets: LFTs backed by real liquidity from day one, with redemption value that grows in real-time based on gamified engagement, structured in self-contained cycles that compound strength over time. In simple terms LFTs are tokens with real liquidity where engagement towards the token is not trading based but gamifications

Liquidity-backed + redemption floor + gamified discovery loop

Unlike speculative tokens that can collapse to zero, every LFT has guaranteed redemption value tied to its cycle's Liquidity Per Unit (LPU)—and that LPU increases automatically as more participants engage the token via hunt through cointag purchases. The more activity in a cycle, the more valuable remaining LFTs become.

"The LFT mechanism mitigates 'collapse to zero' risk by guaranteeing a redemption floor tied to the Liquidity Per Unit (LPU). This LPU operates as an appreciating asset base, growing automatically with increased network activity. The result is a positive feedback loop: greater participation translates directly into a higher, guaranteed value for all LFT holders."

Every token backed by locked liquidity from day one — real redemption floor.

Self-appreciating value: LPU (Liquidity Per Unit) automatically increases when users buy participation tokens (CoinTags).

"Instead of speculative trading, LFTs offer a game-like experience where users engage their skills to find and liquidate tokens based on their actual value."

"LFTs combine DeFi liquidity backing with gamified engagement to create sustainable digital assets that are ERC-20 tokens and EVM compatible "

The future of Web3 tokenization is not assets—it's participation loops built on liquid capital.

“Cash is the most universal RWA, and tokenization + gamification can replace speculation-driven engagement.”

Cash (stablecoins) becomes the base layer, but the real innovation is turning passive capital into interactive, gamified, yield-generating experiences with guaranteed redemption floors.

Our Core Thesis

Trading is intimidating and complex → limited addressable market

Gaming is intuitive and fun → massive addressable market

Solaris transforms passive liquidity into active, gamified financial experiences."

Most Web3 First Time users face friction in the web3 space **LFTs**

Actually Solves a Real Problem

Most people don't want to be traders. They want:

Quick, fun activities

Clear win conditions

Immediate payouts

No need to understand "market dynamics"

Our model delivers all of this.

Token Distribution

Revenue Allocation

for every cointag sale this is the revenue splitting
Example \$25 cointag

Universal Cycle Halving Mechanism

Universal Halving is a deterministic scarcity engine where each new cycle reduces token supply by 50%, starting from a fixed base of 1,000 units.

This creates:

Predictable scarcity

Increasing Liquidity Per Unit (LPU)

Stronger value concentration per cycle

New Supply Curve

Total tokens across all cycles = 1,937.5

Cycle	Token Supply
Cycle 1	1,000
Cycle 2	500
Cycle 3	250
Cycle 4	125
Cycle 5	62.5

Since 30% of a current liquidity for CYCLE 1 is used to start the LFT for next CYCLE 2 the total token will be halved for new minting supply

Universal Halving (Starting from 1,000)

Cycle	Supply	Visual Representation
Cycle 1	1,000	(100%)
Cycle 2	500	(50%)
Cycle 3	250	(25%)
Cycle 4	125	(12.5%)
Cycle 5	62.5	(6.25%)

Scenario analysis

Lets Assume the all cycles have a constant player volume of 10,000 and the cointag price is fixed a \$5 Across all Cycle

Scenario anaylysis

Metric	Cycle 1	Cycle 2	Cycle 3	Cycle 4	Cycle 5
Initial Liquidity (Creator Funded)	\$10,000	\$10,000	\$10,000	\$10,000	\$10,000
Total Players	10,000	10,000	10,000	10,000	10,000
CoinTag Price	\$5	\$5	\$5	\$5	\$5
Total CoinTag Revenue	\$50,000	\$50,000	\$50,000	\$50,000	\$50,000
Token Supply	1,000	500	250	125	62.5
Supply Halving	100%	50%	25%	12.5%	6.25%
Liquidity Added (30%)	\$15,000	\$15,000	\$15,000	\$15,000	\$15,000
Final Liquidity	\$25,000	\$25,000	\$25,000	\$25,000	\$25,000
Liquidity Per Unit	\$25.00	\$50.00	\$100.00	\$200.00	\$400.00

Secondary Trading Market

After the **5th Cycle** a secondary trading market is created where users can trade their tokens in **Centralised Exchange** specific to the Tokens ecosystem after the 5th Cycle Users can longer redeem based on the LFT value but rather the Weighted Average Liquidity Value (WALV)

The secondary Market Liquidity will be based on all Unredeemed LFT liquidity

This system helps transform the each Token ecosystem from a “**game economy**” to a “**real market economy**.”

After the 5th cycle, the system transitions from redemption-based to market-based value.

All cycle liquidity merges into one unified pool, and the Weighted Average Liquidity Value (WALV) becomes the intrinsic market price.

From this point forward, all LFTs can only be traded — not redeemed.

The Use of Interoperability Protocols

We Plan Integrated various Interoperability protocols within the solaris Platform like

- Chainlink Cross-Chain Interoperability Protocol (CCIP)
- Axelar
- Hyperbridge
- LayerZero

This Integrations allows Liquidity Funded Tokens to be
swapable and tradable with any other Token in any other
Blockchain

The Token becomes self sustainable , Transaparent ,
easy to engage and Cashflow driven . it hinders
rug pull and it Creates a Fair Digital Asset System
that favours Creators and Users

LFTs vs Memecoins

- ✓ Can't go to zero – Liquidity backing means guaranteed floor value
- ✓ Transparent mechanics – Users know exactly how value works
- ✓ Predictable appreciation – Clear Token formula vs pure speculation
- ✓ Engagement-driven – Skill/participation matters, not just "ape in early"
- ✓ No rug pulls – Liquidity is locked, creator can't drain it
- ✓ Built-in exit – Redemption rights vs hoping someone buys your bags
- ✓ Value accumulation – Remaining holders benefit as others redeem

The NFT Problems LFTs Solves

1. No Price Floor

NFTs: Can drop to literally \$0. Most NFT collections are now worthless

LFTs: Guaranteed redemption value from locked liquidity – can't go to zero

2. Liquidity Crisis

NFTs: Illiquid – you need to find a buyer willing to pay your asking price

LFTs: Always redeemable at LPU value – instant exit liquidity guaranteed

3. Creator Abandonment

NFTs: Creator gets paid once (mint/first sale), then often ghosts the project

LFTs: Creator earns 20% on every CoinTag purchase – incentivized to stay engaged

4. All-or-Nothing Pricing

NFTs: You pay full floor price upfront (could be \$1K+)

LFTs: Participate through smaller CoinTag purchases (\$25 in your model) – lower barrier

5. Pure Speculation on Resale

NFTs: Your only hope is flipping to someone else at higher price

LFTs: Value appreciates mechanically through participation – plus trading option

6. Winner-Takes-All Discovery

NFTs: Early minters/buyers get best deals, latecomers overpay

LFTs: Everyone pays same CoinTag price to hunt; finding the token is skill/luck-based

NFT Market projection
\$49 - 61 Billion

Digital Assets
\$21 billion

= \$100 billion Market Opportunity

Why Now

The Era of Extraction is Over.

For too long, digital assets have been defined by speculation, hype cycles, and zero-sum games where users are the exit liquidity. We believe the future of Web3 belongs to systems that give rather than take.

Solaris is the end of the "Rug Pull." We are building the first Non-Extractive Launchpad. We reject the model where value is based on promises; instead, we enforce value through Liquidity Funded Tokens (LFTs). Inclusive by Design: We don't just sell tokens; we build economies. Every interaction and CoinTag purchase automatically increases the Liquidity Per Unit (LPU) for the entire community.

Protected by Math: We guarantee a redemption floor that rises in real-time. A Solaris asset can never go to zero. * Sustainable for All: Creators earn from engagement and cash flow, not by dumping on their community.

LFTs target the intersection of Tokenization, DeFi, and skill gaming – a \$100B+ addressable market by 2030.

system grows
without depletion.

Scalable, aligned incentives
for creators,
users, and platform.

Competitive Landscape

LFTs uniquely combine liquidity backing, real-time appreciation, and skill gaming – no direct competitors, but adjacent players:

OpenSea

Coinbase

Rarible

Magic Eden

The Magic: Self-Appreciating Liquidity

Core Innovation: liquidity increase base of every CoinTag to the cycle pool, growing Token in real-time.

Post-Discovery Growth & Trading: Hold LFTs to benefit from ongoing activity and redemptions (fewer LFTs = higher LPU) or trade at market price

Dynamic Value: Unlike static backing, LPU rises automatically

Flywheel Effect: More engagement → higher LPU → more value for holders → viral promotion.

Not a Ponzi: Backed by locked liquidity + fees; sustainable at any scale;
balanced early/late benefits.

Go-to-Market Strategy

Alpha Launch (Q1 2027): Product development & completion Single ChainNetworks testing (BASE);

Go-to-Market Strategy

Alpha Launch (Q2 2027):

200 industry Leading WEB3 KOL partnerships; \$10 – 20K liquidity for LFT launches; gather feedback.

Collette Oziri

Co-Founder

WEB 3 Brand Strategist & Influencer

@TheColetteOzir

[linkedin.com/in/coletteoziri](https://www.linkedin.com/in/coletteoziri)

<https://www.tiktok.com/@thecoletteoziri>

Colette Oziri believes the future of Web3 adoption will not be driven by technology alone — but by storytelling, trust, and culture.

After working closely with digital audiences and observing how Gen-Z interacts with brands online, she realized that many Web3 startups were speaking in technical language while their audiences were craving authenticity, simplicity, and human connection.

This insight led to the creation of ChainbuildrX — a platform and creative growth partner designed to help Web3 founders communicate their vision in ways that resonate with real people.

By combining strategic branding, founder-led content, and deep understanding of internet culture, Colette is building a bridge between innovative blockchain products and the communities meant to use them.

Vision

"To transform digital asset speculation into sustainable participation—where every token has real value, every creator earns fairly, and every participant can engage without fear of total loss."

Mission

Our Mission: To replace the speculative volatility of Web3 with a sustainable, value-backed standard for digital assets. Thereby Creating a path to simplistic WEB3 Massive adoption

The crypto space needs safer speculation. Not everyone wants DeFi complexity or long-term investing. Some people just want fun, short-term bets. LFTs provide:

The thrill of speculation

The engagement of gaming

The safety of backing

The transparency of mechanics

That's a legitimate market position.

yield covers 27.8%

Cost analysis

The preseed capital will be invested in money market fund for a 3month period the yield from it is also measured with our 3month burn rate

In contrast to cost & revenue

we will have a runway of approximately 2 years

Metric	Value	Explanation	
Principal Invested	\$150,000	Total pre-seed capital allocated	
3-Month Burn	\$27,000	Total operational expenses every 3 months	
3-Month Yield	\$7,500	Investment return from money market fund	
Effective Net Burn (3 mo)	\$19,500	Burn after subtracting investment yield	
Yield Coverage	27.8%	Portion of burn covered by investment returns	
Runway (Quarters)	7.69 quarters	$\$150,000 \div \$19,500$	
Runway (Months)	23.1 months	$7.69 \times 3 \text{ months}$	
Estimated Total Runway	~23 months	Approximately 1 year and 11 months	

Summary Note

“We allocate 100% of investor capital into 3-month Treasury Bills yielding 20% annually. The generated yield (~\$30K/year) funds cover about 26% of operational costs, allowing us to operate at a sustainable capacity while preserving investor principal. The model demonstrates disciplined financial stewardship and near-zero capital risk.”
